

The new Africa Savanna exhibits at the Dallas Zoo expand the zoo into a previously undeveloped ten acre property that is located adjacent to the existing Africa Forest exhibits at the zoo. A landscape immersion exhibit that will simulate a trip to the savanna; the exhibit species include elephant, giraffe, zebra, lion, and warthog. The new five (5) acre elephant habitat will house four (4) cow elephants and a separate one (1) acre expansion area may be developed for bulls in the future. The project includes waterholes, rock formations, a children's water play zone, viewing amphitheater, and a climate controlled day lodge with visitor service facilities and classrooms. All water systems will be re-circulated and treated to current state of the art standards and plant selection will include drought tolerant species. The new exhibits will be contiguous to the existing African Village and will expand upon the authentic character of the architecture, the geology, and the landscapes of Africa.
